ABSTRACT

This analysis covers tasks performed by a sprinkler system installer, an occupational title some provinces and territories of Canada have also identified as pipefitter -- fire protection mechanic specialty; sprinkler and fire protection installer; sprinkler and fire protection systems installer; and sprinkler fitter. A guide to analysis discusses development, structure, and validation method; scope of the occupation; trends; and safety. To facilitate understanding the nature of the occupation, work performed is divided into the following categories: (1) blocks, the largest divisions in the analysis that reflect a distinct operation relevant to the occupation; (2) tasks, the distinct activities, that in combination make up the logical and necessary steps the worker is required to perform to complete a specific assignment in a block; and (3) sub-tasks, the smallest divisions into which it is practical to subdivide any work activity and that in combination fully describe all duties constituting a task. Other components of a task are trends, related components, tools and equipment, and supporting knowledge and abilities. Each sub-task is accompanied by results of a validation by all provinces/territories. The 5 blocks, which include 17 tasks, are common occupational skills; water supply installation; piping installation; installation of detection, protection, and control systems; and inspection, maintenance, and repairs. Appendixes include a list of tools and equipment; glossary; blocks and tasks weighting; and task profile chart. (YLB)

The Canadian Council of Directors of Apprenticeship (CCDA) recognizes this occupational analysis as the national standard for the occupation of Sprinkler System Installer.

ACKNOWLEDGEMENTS

Human Resources Development Canada (HRDC) wishes to express sincere appreciation for the contribution of the many industrial establishments, professional associations, labour organizations, tradespeople, provincial and territorial government departments and agencies, and all others who contributed, directly or indirectly, to this publication.

Special acknowledgement is extended to Chris Chinien and France Boutin of Manitoba, who updated this analysis with the assistance of the following representatives from the fire protection system industry:

Dan Beattie British Columbia

John Borlase Ontario

Brian Foley Newfoundland James Fraser Nova Scotia

Stephen Jackson Northwest Territories
Jerry Malloy New Brunswick

Greg Mitchell National Pipe Trades Human Resources Committee (NPTHRC)

Stephen Peters Prince Edward Island

Alain Rivard Manitoba
Edward Shaffer Yukon Territory

Kevin Stewart Alberta

Lorne Zallas National Pipe Trades Human Resources Committee (NPTHRC)

This analysis was prepared by the Human Resources Partnerships Directorate of HRDC. The planning, co-ordination and processing of the analysis were undertaken by staff members of the Policy and Apprenticeship Division.

OTHER RELATED OCCUPATIONAL TITLES

This analysis covers tasks performed by a Sprinkler System Installer whose occupational title has been identified by some provinces and territories of Canada under the following names:

Pipefitter - Fire Protection Mechanic Specialty Sprinkler and Fire Protection Installer Sprinkler and Fire Protection Systems Installer Sprinkler Fitter

FOREWORD

The first National Conference on Apprenticeship in Trades and Industries, held in Ottawa in 1952, recommended that the federal government be requested to co-operate with provincial apprenticeship committees and officials in preparing analyses of a number of skilled occupations. To this end, Human Resources Development Canada sponsors a program, under the guidance of the Canadian Council of Directors of Apprenticeship (CCDA), to develop a series of occupational analyses.

The Occupational Analysis Program has the following objectives:

- ? to identify and group the tasks performed by skilled workers in particular occupations;
- ? to identify those tasks that are performed by skilled workers in every province and territory;
- ? to develop instruments for use in the preparation of interprovincial standards "Red Seal" examinations and curricula for training leading to the certification of skilled workers;
- ? to facilitate the mobility, in Canada, of trainees and skilled workers;
- ? to supply employers and employees, and their associations, industries, training institutions, and governments with analyses of the tasks performed in particular occupations.

GUIDE TO ANALYSIS

DEVELOPMENT OF ANALYSIS

A draft analysis is developed by a knowledgeable consultant who, with the assistance of a committee of industry experts in the field, identifies all the tasks performed in the occupation.

The draft is then assigned to occupational analysts at Human Resources Development Canada for translation and then returned to the consultant for review to ensure conformity with the nationally approved format.

The consultant will then forward a copy of this analysis to provincial/territorial authorities for validation by specialists in the field. Their recommendations are assessed and incorporated into the final draft which also includes the identification of the common core tasks performed in the occupation.

The occupational analysis is published in both official languages.

STRUCTURE OF ANALYSIS

To facilitate the understanding of the nature of the occupation, the work performed is divided into the following divisions:

A. BLOCK is the largest division within the analysis and reflects a	a distinct
---	------------

operation relevant to the occupation.

B. TASK is the distinct activity that, combined with others, makes up the

logical and necessary steps the worker is required to perform to

complete a specific assignment within a "BLOCK".

C. SUB-TASK is the smallest division into which it is practical to subdivide any

work activity and, combined with others, fully describes all

duties constituting a "TASK".

Supporting Knowledge & Abilities

The element of skill and knowledge that an individual must acquire to adequately perform the task is identified under this heading.

Trends

Any shifts or changes in technology that affect the block are identified under this heading.

Related Components

All components of a specified task being undertaken by the sprinkler system installer are identified under this heading.

Tools and Equipment

All tools and equipment necessary for the sprinkler system installer to complete a task are identified under this heading.

- xiii -

VALIDATION METHOD

At the request of the Canadian Council of Directors of Apprenticeship (CCDA), the Standardization Sub-Committee developed a method for the validation of the national Red Seal occupational analyses.

A draft of the analysis is sent to all provinces and territories for validation. Each jurisdiction rates the sub-tasks and applies percentage ratings to blocks and tasks. This method for the validation of the national occupational analysis identifies common core tasks across Canada for a specific occupation. This feature facilitates the weighting of the interprovincial Red Seal examinations.

DEFINITIONS

YES: the sub-task is performed by workers in the occupation in a specific

jurisdiction.

NO: the sub-task is not performed by workers in the occupation in a specific

jurisdiction.

BLOCK %: the average number of questions (items), derived from the collective decision

made by workers within the occupation from all areas of Canada, that will be placed on an interprovincial examination to assess each block of the analysis.

TASK %: the average number of questions (items), derived from the collective decision

made by workers within the occupation from all areas of Canada, that will be placed on an interprovincial examination to assess each task of the analysis.

NV: <u>Not Validated by a province/territory.</u>

ND: Not Designated in that province/territory.

PROVINCIAL AND TERRITORIAL ABBREVIATIONS

NF: Newfoundland and Labrador

NS: Nova Scotia

PE: Prince Edward Island
NB: New Brunswick

QC: Quebec
ON: Ontario
MB: Manitoba
SK: Saskatchewan
AB: Alberta

BC: British Columbia
NT: Northwest Territories

YK: Yukon NU: Nunavut

COMMON CORE

The criteria for determining common core depend on the performance of sub-tasks. If 70 percent of the responding jurisdictions (excluding NVs and NDs) perform a sub-task, it shall be considered common core.

Interprovincial Red Seal examinations are based on the common core identified through this validation process. This process identifies what will be assessed through the interprovincial examination.

BLOCKS AND TASKS WEIGHTING (APPENDIX "C")

This appendix represents the block and task percentages as submitted by each jurisdiction.

Each jurisdiction, with the use of a provincial/territorial occupational advisory committee, validates the content, places percentages on blocks and tasks, and indicates whether or not the sub-tasks are performed by the skilled workers within the occupation. The results of this exercise are submitted to the consultant who then analyzes the data and develops this appendix which provides the individual jurisdictional validation results as well as the national averages of all responses.

PIE CHART (APPENDIX "D")

The graph depicts the national percentages assigned to blocks in the analysis.

SCOPE OF THE SPRINKLER SYSTEM INSTALLER OCCUPATION

The occupational title "Sprinkler System Installer" defines persons who, because of their knowledge, training and abilities, are capable of installing, testing, maintaining, and repairing fire protection systems.

Sprinkler System Installers are usually, but not exclusively, found in industrial, institutional, commercial, and residential situations, such as: plants, factories, office buildings, hotels, apartment buildings, residential buildings, and airports. Fire protection systems may be assembled from a wide variety of equipment, available from a considerable range of manufacturers.

Sprinkler System Installers must often perform their jobs in conditions that present physical discomfort and danger. They have to work overhead and on power lifts, scaffolds, and ladders, and tolerate physical discomfort caused by heavy manual labour and repetitive tasks as well as temperature changes, noises, dust, and environmental hazards.

Accomplishing the Sprinkler System Installer's tasks depends largely on: knowledge of piping systems and components; knowledge of codes, regulations, and laws; experience in a wide variety of situations; ability to operate hand and power tools; and ability to determine the most appropriate and safe means of proceeding with the work. Sprinkler System Installers also need to possess good mechanical and mathematical aptitude, good physical co-ordination, and an ability to plan and think sequentially.

Sprinkler System Installers are routinely required to co-ordinate their work with other tradespeople, who include (but are not limited to) plumbers, steamfitters-pipefitters, sheetmetal workers, bricklayers, drywallers, carpenters, ironworkers, electricians, and insulators. It is important then that installers be at least somewhat familiar with the scope of work encompassed by these trades.

- xvi -

OCCUPATIONAL OBSERVATIONS

Some overlap exists between trade tasks performed by Sprinkler System Installers and other tradespeople. Insofar as this analysis is concerned, an attempt has been made to include tasks done by Sprinkler System Installers everywhere in Canada, regardless of overlaps and/or jurisdictional restrictions.

Technology has contributed to many changes in equipment design and construction. Worth noting are the introduction of lighter materials and system components. These innovations impose constantly changing methods, techniques, equipment, and appropriate skills and knowledge for their proper installation, diagnosis and repair. Remaining current with these changes presents a daily challenge to members of this trade.

Today's equipment is outfitted with a range of technologically sophisticated features and systems, some computerized, that in some cases have reduced some of the maintenance formerly required. As equipment becomes more technically complex, accompanying manuals and charts tend to be very specific in terms of factors critical not only to the job at hand, but also to the long-term operation of the system.

The work of a Sprinkler System Installer, by its nature, continues to be somewhat hazardous. Errors in judgement or in application of trade knowledge can be costly, both in terms of injury to workers and building occupants, and damage to equipment or materials. Workers must maintain constant vigilance in working safely and preventing accidents at all times.

Sprinkler System Installers are more than ever required to document and maintain records, as a result of more stringent laws and regulations. Fire protection systems are becoming more common in residences where, just as in industrial and other settings, they must be appropriately installed, inspected and documented. This places more responsibility on individuals who work in smaller crews.

Legislated preventative maintenance, intended to reduce hazards and costs related to system failures, has increased the amount of work available for the Sprinkler System Installer.

A high standard of trade professionalism and the ability to communicate effectively is of great importance.

The knowledge and ability to use and maintain power-elevated work platforms are becoming requirements for certification.

- xvii -

SAFETY

Safe working procedures and conditions, accident prevention, and the preservation of health are of primary importance to industry in Canada. These responsibilities are shared and require the joint efforts of government, employers, and employees. It is imperative that all parties become aware of circumstances that may lead to injury or harm. Safe learning experiences and environments can be created by controlling the variables and behaviours that may contribute to accidents or injury.

It is generally recognized that safety-conscious attitudes and work practices contribute to a healthy, safe, and accident-free working environment.

It is imperative to apply and be familiar with the Occupational Health and Safety Act and Regulations. As well, it is essential to determine workplace hazards and take measures to protect oneself, co-workers, the public, and the environment.

As safety education is an integral part of training in all jurisdictions, personal safety practices are not recorded in this document. However, the technical safety aspect relating to each task and sub-task are included throughout this analysis.

- xviii -

ANALYSIS

BLOCK A

COMMON OCCUPATIONAL SKILLS

Trends:

Greater awareness for safety on the part of employers and employees regarding hazards associated with use of tools and equipment. New methods, tools and materials are being introduced on a continuous basis. Increased use of computers and communication technologies. Increased awareness among employers and employees regarding the critical importance of knowledge and skill upgrading. Tendency towards smaller work crews composed of highly skilled and versatile workers. Scaffolding certification becoming necessary. More responsibilities assigned to individual installers. Trend towards fast tracking tasks using pre-fabricated components. Increased demand for installers to possess superior communication and interpersonal skills and to present themselves in a professional manner.

Task 1 Plans work activities.

Related Components: Contract documents, work schedules, specifications, codes and

standards, regulations, technical manuals, work site meetings,

INSPECTION, MAINTENANCE, AND REPAIRS

Trends:

Increased legislation and regulations requiring specialized training and certification. Increased requirements for inspecting and testing of new and existing systems. Increased demand for maintenance contracts. Increased use of technologically advanced equipment. Increased interconnection with addressable fire alarm systems.

Task 14 Maintains fire protection systems.

Related Components: Maintenance form, resource material, code requirements

Tools and Equipment: Hand and power tools, specialty equipment, measuring tools,

testing, hoisting, lifting, access, and safety equipment

APPENDICES

TOOLS AND EQUIPMENT

Sprinkler System Installers may be required to supply their own boots, coveralls, gloves and code book NFPA 13. Items such as hard hats, protection for eyes, ears, and lungs, and all other tools and equipment are usually the responsibility of the employer.

Basic Tools

adjustable wrenches (various sizes) oil can Allen wrenches (metric and imperial) pail

broom paint brushes

brushes (various bristle brushes for caulking gun, chain vice, pipe vice, cleaning and scrubbing) pipe wrench

code book pliers (needle nose, slip joint)

cold chisels (various sizes) plumb bob combination wrenches (metric and imperial) rod dies die and chasers plumb bob pry bar rod dies scissors

drywall saw scrapers (various sizes)
electric cord screwdrivers (flat, Phillips,
files (flat, half-round, rat-tail,
Robertson, various sizes)

bastard) shovel

flashlight snips (heavy duty sheet metal

funnel cutting)

gasket cutter socket sets (metric and imperial)

grease gun
hacksaw
stapler
hammers (ball-peen, claw, sledge)
hand saw
heaters (electric, natural gas, oil)
hose wrench
soldering iron
stapler
utility knives
vice-grip
water hose
wire brush

hose wrench wire brush line-up bars wire cutter

mop wrench sets (open- and closed-ends,

nipple chuck combination)

Power Tools and Equipment

air monitoring device jig saw
arc welder knife groover
back-flushing machine man lift

chop saw mechanical pipe-joining equipment

compressor oxyacetylene brazing torch concrete cutting machine oxyacetylene cutting torch

core driller pipe cutter

die equipment power spray-painting equipment

drills (portable magnetic base, drill

press)

- 43 -

powervise

electric drills reamer (hand-held or mounted on

electric portable circular saw power threader) electrical induction equipment reciprocating saw electronic measuring device roll groover grinders (wire brush, angle grinders) sandblast equipment

hammer drill

hand-held electronic tape tapping machine and attachments

hand-held and stationary radios testing pump headphones threading machine heating torch vacuum cleaner (wet/dry)

hydraulic bender water pump

impact wrenches (electric or wire wheel (body grinder or angle

pneumatic) grinder with wire brush)

Specialty Equipment

bench vice groovers (cut, roll) crimping tools heating torch concrete tools press fit, T-drill digital camera test blanks

flaring tool trowels (concrete and pointer)

foam pump\freeze packs

Measuring Equipment

builder's level magnetic level calculator spirit level callipers square depth gauge straightedge dial indicator tape measure drafting equipment thread depth gauge feeler gauge torque wrench laser level transit liquid measuring containers vernier calliper

Testing Equipment

adapter fittings play pipes amp/volt meter pressure gauge kit battery load tester refractometer calibrating gauge RPM reader computer sight tube dampening devices stop watch differential pressure gauge tachometer flow meter temperature gauge

heat lamp test hoses and securement

hoses testing pump, excess, protomatic test

hydrometer pump manometer two-way radio

Pitot tubes

- 44 -

Hoisting, Lifting, and Access Equipment

cable clamps pipe buggy (pipe cannon)

chain block hoist pipe stand chains portable boom

choker rope

come-alongs (cable or chain) scaffolding (safety)

fork-lift shackles
jack sling
hand-turfer spreader bar
ladder stand
overhead hoist support
power-elevated work platform tugger

Safety Equipment

air hood gloves air monitoring device goggles

apron mask (particle, vapour)

boots reflector vest coveralls respirator earplugs and earmuffs safety glasses

face shield safety helmet (hard hat)

fall arrest system self-contained breathing apparatus

filtration mask (SCBA)

fire blanket tag- and lock-out devices fire extinguisher travel restraint system fire hoses welding partition

fire-retardant clothing

GLOSSARY

accelerators and exhausters quick-opening devices used to allow air to escape from a piping

system, thereby speeding the tripping action of a dry pipe valve

air dryer any one of several types of air dryers, such as refrigerated air

dryers and desiccant air dryers

air maintenance devices equipment used to maintain system air pressure. This includes

pressure regulators and compressors.

arc welding includes: air arc welding, shielded metal arc welding (SMAW)

and gas metal arc welding (GMAW)

backflow preventer any type of equipment that prevents reversal of water flow and

protects potable water supply

caution tape coloured tape buried just above and in line with underground

piping to notify future excavators that hey are approaching

buried pipe

choker type of cable with loops on both ends that is used for rigging and

lifting materials and equipment

CSA Canadian Standards Association

dry pipe system with open sprinkler heads, set up so that when

the system is tripped all heads spray simultaneously

dies equipment used to cut external threads in rod or pipe

double-interlock system sprinkler system that is set up so that it requires commands from

two zones to make it operate

dry pipe system sprinkler system employing automatic sprinklers attached to a

piping system containing air or nitrogen under pressure, which when released (as by a sprinkler opened when heat causes a fuse element to melt) enables the water pressure to open a valve known as a dry pipe valve. The water then flows into the piping

system and out the opened sprinklers.

flow switch device that monitors water flow

foam proportioner device in a foam fire-extinguishing system that mixes water with

foam concentrate

grade slope of a pipe or trench, usually expressed as a ratio of rise

(change in elevation) to run (change in distance)

grooving (of pipe) step in a process of mechanically joining pipe in which a groove

is cut or rolled around the pipe to accommodate a clamp

heat-actuated detectors (HAD) heat-activated device, triggered when a specified temperature or

rate of increasing temperature is detected

hangers equipment installed on pipes to allow them to be attached to

overhead or other support structures

head guards devices used to protect sprinkler heads from damage

heat tracing insulated electrical heating wire wound around pipes to prevent

them from freezing

mains term used to describe the large main runs of pipe in a system

locater wire wire placed above underground non-metallic piping to enable

locating those pipes later

manual pull station manual device used to activate a fire protection system

NFPA National Fire Protection Association (American organization)

packing material placed around water or oil-tight shafts to prevent

leakage

pigtail type of packing removal tool

plates aesthetic or cosmetic plates through which sprinkler heads enter

the building space (sometimes called escutcheon plates)

play pipe flow test pipe attached to the end of a fire hose

pre-action valve mechanical latch-and-lever dry pipe valve

press-fit type of pipe joining system that employs special fittings and

methods of assembly

reaming process to restore a pipe to its original inside diameter, usually

by removing internal burrs formed when the pipe was cut

retard chamber piece of equipment that is used to prevent false alarms by

accumulating small amounts of water and which allows for

drainage of water surges

rodding threaded rod attached to and running the length of underground

piping installations, in order to prevent hydraulic pressure from

moving or separating pipe joints

shoring mechanical or wooden supports placed along the sides of an

excavation to support the soil and prevent collapse

sleeve mechanical block-out installed before or after concrete or other

structural placement to enable pipes to pass from one area of a

structure to another

sling metal or synthetic flexible device used to cradle or support a

load. Slings are attached to the hoist line of the lifting device to

complete the lift.

standpipe system system to which fire-fighting hoses are attached, usually in high-

rise buildings

tamper switch device that monitors the opening or closing of a valve by

sounding alarms. Two examples are post-indicator valves and

outside stem yolks.

thrust block concrete restraint cast in place at any critical point in

underground piping installations, in order to prevent hydraulic

pressure from moving or separating pipe joints

trimming smaller or auxiliary piping attached to installed devices such as

valves and pumps. Often supplied as a "trim package".

valve device placed in a pressurized piping system in order to control,

direct, or prevent the movement of chemicals, gases, liquids or other substances (examples include: swing, check, wafer check, vertical gate, ball check, ball drip, relief, solenoid, pneumatic,

shut-off)

vane-type flow switch switch activated by vanes that indicate the movement of

substance in the piping

water motor gong water-operated local alarm

wet system / wet pipe system /

sprinkler system

sprinkler system triggered by heat from a fire in which water discharges immediately from sprinklers. The automatic sprinklers are attached to a piping system containing water and

connected to a water supply.

TITLES OF BLOCKS

Block A	Common Occupational Skills	Block D	Installation of Detection, Protection, and Control Systems
Block B	Water Supply Installation	Block E	Inspection, Maintenance, and Repairs
Block C	Piping Installation		

^{*} The average percentage of the total number of questions on an interprovincial examination, assigned to assess each block of the analysis, as derived from the collective input of workers within the occupation from all areas of Canada. Interprovincial examinations typically have from one hundred to one hundred and fifty multiple-choice questions on each examination.

APPENDIX "E"

SUB-TASKS		•			5.06 Patrims n. required tests.			d 8.06 Drills pipe. 8.07 Installs filtings. 8.08 Paints pipe.	
	1.05 Completes contractual site requirements.				5.05 Flushes underground system.			8.05 Welds pipe and brackets.	9.05 Installs sway/seixnic bracing
	1.04 Schechles equipment and materials.	2.04 Maintains portable power tools.			5.04 Installs underground piping and components.	6.04 Performs required tests.	7.04 Performs required tests.	8.04 Grooves pipe.	9.04 Prevents leaks from steeves.
	1.03 Plans work process.	2.03 Uses portable power tools.		4 03 Uses material handling equipment.	5.03 Supervices Urraching and backfilling.	6.03 Installs piping and components.	7.03 Installs related equipment.	8.03 Threads pipe.	9.03 Installs pipes.
	1.02 Determines materials and labour requirements.	2.02 Maintains hand tools.	3.02 Maintairs equipment.	4.02 Uses and maintains power- elevated work platforms.	5.02 Determines trenshing requirements.	6.02 Installs pumps and controllers.	7.02 Installs water tanks and reservoirs.	8.02 Bends pipe.	9.02 Installs sleeves.
	1.01 Interprets drawings and specifications.	2.01 Uses hand tools.	3.01 Uses equipment.	4 01 Erects staging, scaffolding, and badders.	5.01 Determines routing for water supply.	6.01 Determines location for pumps.	7.01 Determines location for unks and reservoirs.	8.01 Cuts pipe.	9.01 Installs pipe support.
TASKS	1. Plans work netwites.	2 Uses and maintains hand and partable power tools.	3. Uses and maintains equipment.	4. Uses hoisting, lifting, and access equipment.	5. lissalls water supplies.	6. Installs fire and broster pumps.	7, installs water supply systems.	R Perpures piping and fittings for installation.	9. Installs priping.
BLOCKS	Common Occupational Stills.				Water Supply Installation	68		Piping Installation	

* NOT COMMON CORE

10.12 Installs portable extinguishers.

10.10 Installs water standpipe systems. mist systems.

10.07 Services halon 10.08 Installs foam systems.

10.6 Installs clean agent systems.

10.05 Installs chemical systems.

10.04 Installs pre-action/deluge systems.

10.03 Installs anti-freeze systems.

10.02 Installs dry systems.

10.01 Installs wet systems.

TASKS

BLOCKS

11.05 Installs spark detection systems.

11.04 Installs heat-actuated detectors (HAD).

11.03 Installs detector wire systems.

11.02 Installs wet and dry pilot lines.

11.01 Installs sprinkler heads.

SUB-TASKS -

13.02 Installs alarm-initiating devices. 12.02 fretalls auxiliary devices. 13.01 Installs monitoring devices. 12.01 Selects auxiliary devices.

13. Installs system supervisory devices.

14.01 Schedules maintenance. 14. Maintains fire protection systems. 15. Repairs fire protection systems.

14.05 Performs fire watch function

14.04 Tests postable fire extinguishers.

14.03 Services auxiliary equipment.

14.02 Services fire protection systems.

15.04 Tests repairs.

15.03 Repairs deficiencies.

15.02 Troubleshoots fire protection systems.

16.02 Performs visual inspection.

16.01 Schedules inspection.

17. Tests fire protection systems.

17,01 Schedules tests.

17.03 Completes reports.
